

ABSTRACT OF THE DISCLOSURE

Encoded ^{moving} ~~animating~~ image data is decoded, the
 decoded ^{moving} ~~animating~~ image data is intraframe encoded and
 stored, ^{and} the image which was stored and intraframe
 5 encoded is decoded and subjected to an arbitrary
 edition, ^{the} and the edited frame image is encoded by an
^{moving} ~~animating~~ image encoding system, thereby reducing a
 memory capacity when ^{a moving} ~~an animating~~ image edition is
 performed and realizing a high processing speed.
